Languages

TypeScript, JavaScipt

Frontend

Svelte, SvelteKit, React, Tailwind CSS

Backend

Node.js, Express, REST APIs

Databases

MongoDB (Mongoose), BigQuery

Architecture & SEO

Server-Side Rendering, JSON-LD, Structured Data

EDUCATION

General Assembly

500+ hours of full-stack development

Columbia College

Associates of Arts
2014

AWARDS

Apartment Association of Kansas City

Assistant Manager of the Year
2018 Crystal Merit Award

PROFILE

With 5+ years of experience building scalable web applications with modern TypeScript frameworks, I've grown from a junior developer into a technical lead by maintaining a strong growth mindset and a curiosity for understanding systems end to end.

Selected Engineering Projects

SEO Job Platform – https://cdllife.com/jobslist

Architected and built an internal SvelteKit platform generating thousands of programmatically generated SEO pages with automated sitemap generation and structured data for Google Jobs. Replaced a costly third-party vendor while maintaining Lighthouse 100 performance and strong search visibility.

Driver Profiles | Application Management Portal – Launching soon!

Stabilized the Driver Profiles portal, a SvelteKit application integrating job board, mobile API, and SSO systems; resolved authentication race conditions, fixed verification flaws, and improved onboarding reliability across services.

CDLConnect Pro – https://pro.cdlconnect.io

Developed a recruiting analytics dashboard using SvelteKit, TypeScript, and BigQuery to visualize and analyze recruiting funnel performance. Built interactive data visualizations with Observable Plot and D3 to help teams identify hiring trends and optimize recruitment strategies.

WORK EXPERIENCE

Full Stack Software Engineer | Technical Lead

Uhray (CDLLife) | Feb 2021 – Present

Digital media and recruiting platform connecting trucking companies with drivers through job marketplaces, driver tools, and lead generation systems serving a nationwide audience.

- Led development of production web platforms using SvelteKit, Node.js and MongoDB, supporting high-traffic job marketplace tools and internal operational systems.
- Designed and built an internal SEO-optimized job landing page system, replacing an external vendor and generating thousands of indexable pages with automated sitemap infrastructure.
- Led stabilization and launch of a driver job application portal, resolving SSO authentication issues, improving onboarding flows, and optimizing API performance.
- Provide technical leadership through code reviews, architectural guidance, and mentorship while contributing to internal engineering standards and developer growth.

Property Manager

The Cordish Companies – Kansas City, MO | Apr 2019 – Aug 2020

National real estate developer known for large-scale mixed-use entertainment and residential developments. Managed operations for One Light Luxury Apartments, a premier downtown KC high-rise community.

- Held bottom-line responsibility for $86 million luxury high-rise in downtown Kansas City consisting of 307 apartment homes, 330,000 square feet, and a team of 14 employees
- Exceeded market rate increase of 2% and obtained budgeted increase of 5% through vacancy forecasting and increased resident retention
- Hit record breaking leasing numbers of 100% leased in August 2020
